

Part Number	LSUM 051R3C 0188F EA DC	
Document Number	V00_151023	

LSUM 051R3C 0188F EA DC Series

Version	Date	Change Description	Author
V00	23 . Oct . 2015	Product specification	S.W Son

■ Specification

1. Primary specification

Part number	Capacitance (F)	Resistance DC (mΩ)	Max. Current (A, 1s)¹	Leakage Current (mA)
LSUM 051R3C 0188F EA DC	188	5	2,400	< 8

2. Power & Energy

Part number	Usable Specific Power, P _d (W/kg)	Impedance Match Specific Power, P _{max} (W/kg)	Energy Density (Wh/kg)	Stored Energy (Wh)
LSUM 051R3C 0188F EA DC	4,400	9,200	4.8	68.7

3. Standard & Reliability

Rated Voltage	51.3V		
Max. Voltage²	54.0V		
Maximum series Voltage		750V	
Capacitance Tolerance		-0% / +20%	
Resistance Tolerance		< Spec. Value	
Operating temperature range		-40 ~ 65 °C	
Storage temperature range		-40 ~ 70 °C	
Endurance	After 1500 hours application of Rated voltage .DC at 65 ℃, the capacitor shall meet the following limits.		
	Capacitance change	Within 20% of initially specified value	
	Internal resistance change Within 100% of initially specified value		
Shelf life	After 1500 hours storage at +65 °C without load shall meet specification of endurance		
	After 10 years at rated voltage and +25 °C		
Life Time (25°C)	Capacitance change	Within 20% of initially specified value	
	Internal resistance change Within 100% of initially specified value		
	After 1,000,000 cycles between rated voltage to half rated voltage at +25 °C		
Cycle Life (25°C)	Capacitance change	Within 20% of initially specified value	
	Internal resistance change	Within 100% of initially specified value	

4. Monitoring

Part number	Temperature sensor	Temperature interface	Connector	Cell voltage monitoring	Balancing
LSUM 051R3C 0188F EA DC	NTC Thermistor	Analog	Deutsch DTM	Over Voltage Alarm	Active

^{*}Remarks
1) Current for 1sec discharge from the rated voltage to the half of it in constant current discharge, do not use as an operating current.
2) Non repeated, not to exceed 1sec.

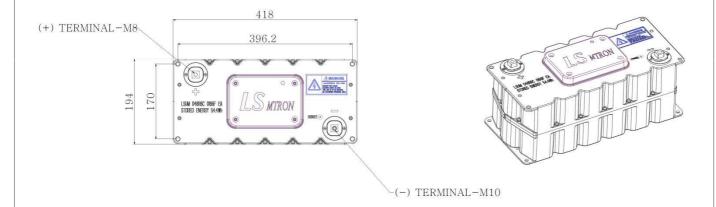

■ Safety & Physical Protection

	Isolation voltage (DC)	Short circuit current(A)	Power Terminals	Recommended Torque - Terminal	Environmental Protection	Shock & vibration Protection
ĺ	2.5kV	10,000	M8 / M10	20 / 30 Nm	IP 65	IEC61373

Dimension in mm (not to scale)

■ Geometric properties

Part number		Moight (kg)		
Part number	Length	Width	Height	Weight (kg)
LSUM 051R3C 0188F EA DC	418.0(+2.0/-0.0)	194.0(+2.0/-0.0)	175.4(+2.0/-0.0)	14.2 ±0.5

Technical Information (1)

■ How to calculate specification value

1. The Measurement Methods

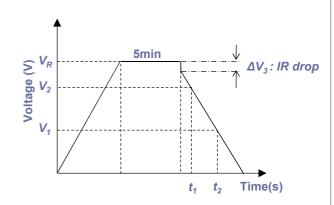

1-1 Capacitance

Apply rated voltage and charge for 5min after the constant current / constant voltage power supply has achieved the rated voltage. After a charge for 5min has finished, discharge with 10mA/F to 0.1V.

Measure the time t1 to t2 where the voltage between capacitor terminals at the time of discharge reduces from V1 to V2 as shown figure and calculate the capacitance value by the following formula:

$$C = \frac{Ix(t_2 - t_1)}{V_2 - V_1}$$

1-2 Resistance

Where

The DC resistance of a capacitor shall be calculated by the following formula;

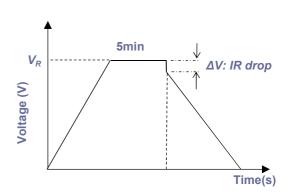

$$R_{DC} = \frac{\Delta V}{I_{DC}}$$

 R_{DC} is the DC internal resistance (Ω);

V is the effective value of AC voltage (V);

ΔV is the drop voltage for 10ms (V);

I_{DC} is the discharge current (A);

Technical Information (2)

1-3 Leakage current

The leakage current shall be measured using the direct voltage appropriate to the test temperature (25 $^{\circ}$ C) for 72hrs.

1-4 Maximum current

Current for 1sec discharge from the rated voltage to the half of it in constant current discharge,

$$I_{Max} = \frac{V_R - 0.5 * V_R}{\triangle t / C + R_{DC}}$$

Where I_{Max} is the Maximum current (A);

△t is the discharge time (sec), 1 sec in this case;

c is the capacitance (F);

 R_{DC} is the DC resistance (Ω);

 V_R is the rated voltage (V).

1-5 Maximum stored energy (E_{MAX})

$$E_{MAX}(Wh) = \frac{\frac{1}{2} CV_R^2}{3600}$$

2. The Standard Atmospheric Condition for Measurement

All test and measurements shall be made under standard atmospheric conditions for testing. Before the measurements are made, the capacitor shall be stored at the measuring temperature for a time sufficient to allow the entire capacitor to reach this temperature. The period as prescribed for recovery at the end of a test is a normally sufficient for this purpose.

Temperature : $15\sim35$ °C Relative humidity : $25\sim75\%$ Air Pressure : $86\sim106$ kPa
