### Description

Isolated BCD series chargers feature precision charging voltages for 1, 2 or 3 banks of batteries at 12, 24, 32, 36, 48 or 72(rail) volts DC. Models are available to operate from input voltages as low as 10 VDC and up to 400 VDC at power levels from 300 to 1500 watts.

All models feature user selectable 2-stage or 3-stage charging profiles, temperature compensation and user initiated battery equalization for optimum charging and maximum battery life. Full isolation allows different ground levels to be accommodated (i.e. Charging a positive ground battery from a negative ground source or vice-versa).
