24V / 95A Battery Charger

Description

The CHFC-3 Single Phase charger is an innovative device with extraordinary versatility, reliability and efficiency. Different software may be installed to change the charging features and to adapt them to every kind of battery. The reduced size of this model means that it can be not only installed on the wall, but also carried on board. Consequently the battery can be charged in whichever plug available, without driving the machine to the charging area.
